

Indian Key uses the standard mailbox that's available at Home Depot, Lowe's or many other places. The attributes are:

- The mailbox is white.
- The dimensions are approximately 20”L X 9”H X 7”W
- The box is rounded at the top

The following image illustrates these general characteristics:

What's important here are the size, the shape, and the. This is meant to serve as a general example only.

The general guidelines for the post are:

- It be painted white in color.
- The post has the general form shown in the following picture.
- The dimensions of the material should be approximately 4” X 4” (round, or turned posts are not acceptable.)
- The post should be installed plumb and level so that the mailbox is at a USPS approved height.
- The post should be clean and in good repair.

The following image illustrates an unpainted post that otherwise has the correct characteristics:

Again what is important here is the general shape and characteristics. The dog-eared ends and the inset detailing are not required. This post would have to be painted white after installation to meet Indian Key standards. Such posts, or acceptable variations, are available at Home Depot, Lowe's, or many other places.

The post must be installed so that the mailbox sits at a height acceptable to the United States Postal Service.

The property address should be displayed on the post in numbers of contrasting color that are acceptable to the United States Postal Service.
